01 Product at a glance

One Wallet. Every Network. Complete Control.

reWallet is a decentralized, non-custodial, multi-chain crypto wallet for iOS, Android, Web and browser extension. Users hold their own keys and can send, receive, swap, bridge across chains, collect NFTs and earn cashback — in one secure app. Businesses can launch it **under their own brand** as a fully managed white-label wallet, in days.

2
products in one
A consumer wallet people can use today, and a white-label wallet businesses can deploy.

4
platforms at once
iOS, Android, Web and browser extension, deployed together.

Days
to launch
Instead of the 12+ months an in-house wallet build takes.

Elevator pitches

10 SECONDS

reWallet is a non-custodial, multi-chain crypto wallet — and you can launch it under your own brand in days.

30 SECONDS

Building a crypto wallet takes a year, a full engineering team and endless maintenance. reWallet gives you a finished, decentralized wallet — swaps, cross-chain bridge, NFTs and cashback — with your logo, colours and networks, live on iOS, Android, Web and extension at once. We run the stack, push every update and add new networks or dApps on request.

CONSUMER ONE-LINER

Your wallet. Your keys. Your assets — across every network, with no account freezes.

Status today

- Website live at **rewallet.online** with an interactive demo, explainer video and white-label configurator.
- Beta apps: iOS via TestFlight, Android via APK — downloadable from the site.
- White-label requests captured through an 8-step form and delivered to info@rewallet.online.

02 The problem & our answer

For businesses — the problem

- A wallet takes **12+ months**: key management, multi-chain support, swaps, bridges, security audits, four platforms.
- It needs a **specialist team**: iOS, Android, Web, Rust/Solidity, DevOps, security, QA, node operations.
- It is **never finished**: new chains, new standards, security patches, store updates.
- Adding a network or dApp means **another project**.

reWallet's answer

- **Production-ready wallet** you brand and deploy.
- **Time saving** — live in days, not months.
- **Developer saving** — no wallet team to hire; one integration.
- **Future updates** pushed by us.
- **Special requests** — new networks and in-browser dApps on request.
- **Fully managed** architecture and tech stack.
- **Deploy at once** — iOS, Android, Web, extension.

For users — the problem

- Exchanges can **freeze accounts** and hold your keys.
- Assets are spread across **many chains and apps**.
- Swapping and bridging is **confusing and risky**.

reWallet's answer

- **Non-custodial** — keys on your device; no freezes, no third-party control.
- **Multi-chain** portfolio in one place, any currency display.
- **Transparent** swaps and bridges, biometric approval, risk alerts.

Proof the website gives

Every claim above is **demonstrated** on rewallet.online — not just stated: the narrated explainer tells the story, the live demo lets people use the wallet, the configurator shows their brand on it, and the beta links let them install the real app.

03 Audiences & what each one cares about

Audience	What they care about	Lead with	Best site section
Banks & financial institutions	Compliance, security, brand control, vendor reliability	Compliance settings, non-custodial security, fully managed, dedicated support	Security, White-label → Compliance
FinTech companies	Speed to market, cost, user experience	Live in days, no wallet team, polished app	Why reWallet video, Live demo
Crypto exchanges	Self-custody offering, multi-chain, swaps & bridge	Any-to-any bridge, swap providers, fees revenue	Bridge, Swap & Fees tab
Merchants & retail	Payments, loyalty, cashback	Merchant pay, cashback programs	Programs tab, Merchant Pay demo
Web3 platforms	dApp access, custom networks, tokens	dApps on request, custom RPC, own token	Networks, Chains & assets
Governments	Sovereignty, data residency, identity	On-premise / your cloud, reID identity, region profiles	Form step 6–7, Security
Enterprises	Brand, integration with existing systems	SDK / embedded option, integrations (API, CRM, SSO)	Form step 2 & 5
Everyday crypto users	Ownership, simplicity, rewards	Your keys, every network, cashback	Hero, Download beta

Primary persona (B2B)

Head of Digital / Product at a bank or fintech in the GCC. Has a mandate to offer digital assets, limited engineering capacity, strict compliance, and a 3–6-month window. Needs a credible vendor, a demo to show leadership, and a clear path to launch. *Message:* "Your branded, compliant, non-custodial wallet — live in days, fully managed."

04 Positioning, messaging & key lines

Positioning statement. For businesses that want to offer their own crypto wallet, reWallet is the white-label, non-custodial, multi-chain wallet that launches in days — because the product, the stack and every future update are already handled.

Messaging pillars

Pillar	Message	Supporting points
Ownership	Your wallet. Your keys. Your assets.	Non-custodial · keys on device · no account freezes · no third-party control
Every network	One wallet. Every chain you need.	Ethereum, BNB Chain, TRON · L2s coming · custom RPC · networks on request · any-to-any bridge
Security	Multiple layers of protection. Zero custody.	Face ID, passkeys, PIN, recovery phrase · encryption · transaction preview · risk detection
Your brand	Your brand. Your theme. Our wallet engine.	6 themes · logo · colours · networks · tokens · fees · cashback · compliance
Speed & savings	Launch your own wallet — without building one.	Days not months · no wallet team · updates pushed · fully managed · deploy at once

Approved headlines & taglines

- One Wallet. Every Network. Complete Control.
- Launch your own decentralized wallet — without building one.
- Your brand. Your theme. Our wallet engine.
- Multiple layers of protection. Zero custody.
- Move assets between networks in seconds.
- Feel the app before you install it.
- No account freezes. No third-party control.

Words we use / avoid

Use

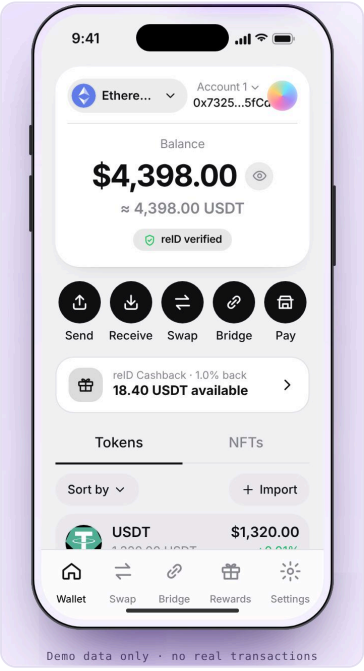

decentralized · non-custodial · multi-chain · white-label · fully managed · deploy at once · your keys · on request

Avoid

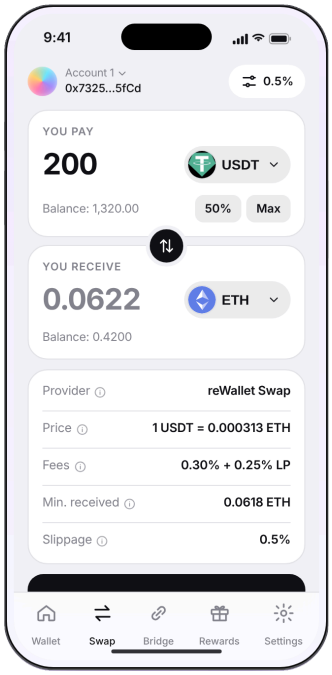

"Bank-grade"/"unhackable", guaranteed returns or yields, "custodial" language, naming internal infrastructure brands, and claims about networks that aren't live yet (say "coming soon").

05 Product capabilities (consumer wallet)

Area	Capability
Wallet setup	Create a wallet; import by recovery phrase or private key; manage multiple wallets
Networks	Ethereum, BNB Chain, TRON live · Polygon, Avalanche, Arbitrum, Optimism, Base, Solana coming soon · custom EVM networks via RPC & Chain ID · new networks on request
Tokens	USDT, USDC, ETH, BNB, TRX, ERC-20, TRC-20; import any token by contract address; custom symbols, decimals and explorers
Swaps	Instant swaps with transparent rate, network fee, price impact, minimum received, liquidity and estimated arrival
Cross-chain bridge	Any network to any network, including multi-hop routes; fee, gas and arrival shown up front
NFTs	View, send and receive NFTs; import collections; display artwork and metadata
Identity & rewards	Connect reID: verified identity, single sign-in, automatic cashback (pending, available, claimed, history)
Security	Face ID / fingerprint, passkeys, PIN, recovery phrase, on-device encryption, transaction verification, risk detection and notifications
Portfolio	Primary display in USD, EUR, GBP, INR, SAR and more; secondary in USDT, USDC or other crypto; balances, analytics, history
Control	Rename and export wallets, backup and recovery, address book, QR scanner, favourites, transaction history

Real app home screen (site demo)

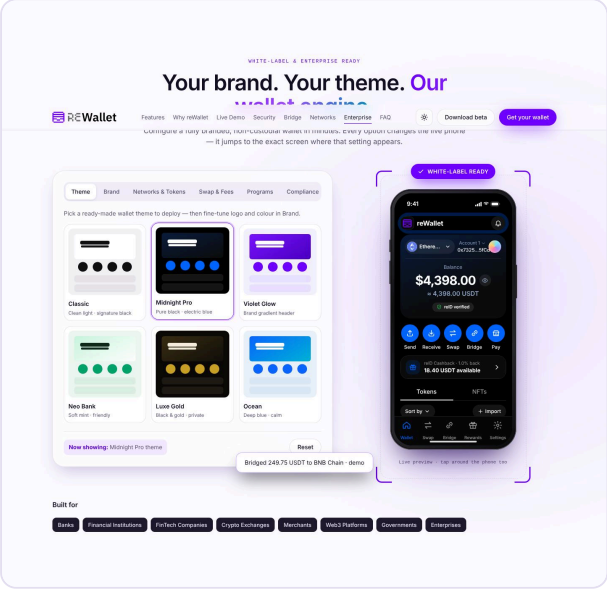

Swap screen with full transparency

06 The white-label offer

A complete wallet under the client's brand, with everything configurable and everything run by reWallet.

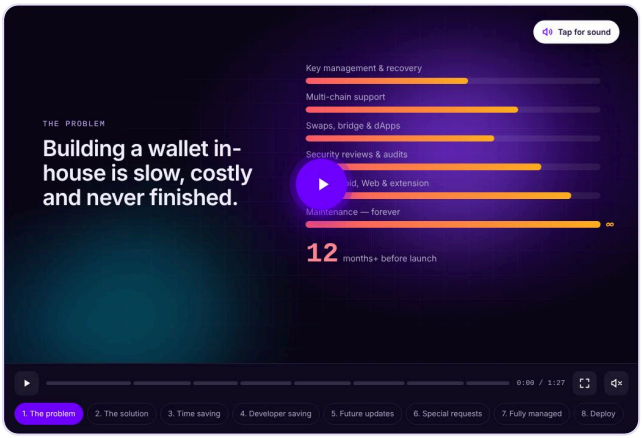

What the client chooses	Options
Delivery model	Full white-label app · SDK / embedded wallet · co-branded
Platforms	iOS · Android · Web · browser extension · desktop
Look & feel	6 ready themes (Classic, Midnight Pro, Violet Glow, Neo Bank, Luxe Gold, Ocean) or custom; logo, colours, app name, light/dark, languages
Chains & assets	Networks, custom RPC networks, default tokens, own token, NFTs
Features	Swaps, bridge, dApp browser, NFT gallery, cashback, merchant pay, fiat on/off-ramp, staking, push notifications
Commercials	Swap & bridge providers, platform transaction fee, cashback programs
Compliance	KYC/identity, Travel Rule, sanctions screening, limits, audit logs, region profile, data residency
Infrastructure	Fully managed · client cloud · on-premise
Updates & support	Automatic / approved / scheduled releases · standard, priority or dedicated support

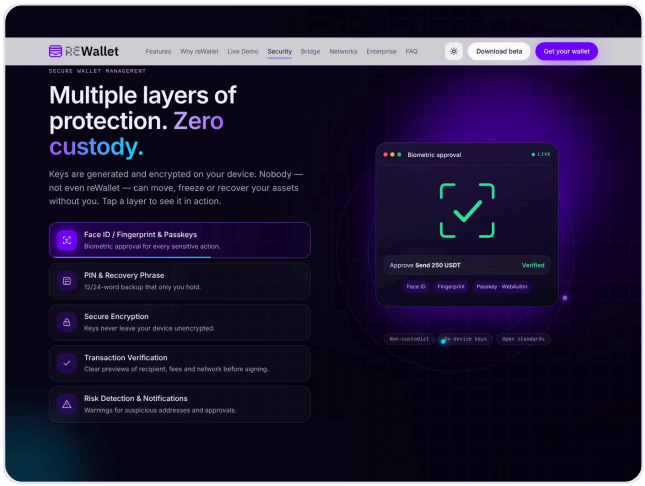

The configurator on the site lets prospects see their own brand on the wallet before talking to sales

07 Website tour — what each section does for marketing

Section	What visitors see	Marketing job	Link to share
Hero	Headline, rotating multi-chain globe, live blocks, auto-touring app	Instant category & credibility	`rewallet.online`
Features	10 feature cards from the brand kit	Breadth of product	`/#features`
Why reWallet	90-sec narrated explainer, 8 chapters + 6 benefit cards	Tell the problem/solution story	`/#why`
Live demo	Interactive phone: send, swap, bridge, rewards, pay, settings	Let people feel the product	`/#demo`
Security	5 animated security layers	Build trust	`/#security`
Bridge	Working mock bridge between any networks	Show multi-chain power	`/#bridge`
Networks	Live, coming soon, on request	Answer "do you support X?"	`/#networks`
White-label	Configurator with 6 themes + live phone	B2B wow moment	`/#enterprise`
FAQ	11 common questions	Remove objections; feeds AI answers	`/#faq`
Download	TestFlight + APK with QR codes	Beta sign-ups	`/#download`
Request form	8-step white-label brief	Qualified B2B leads	`/#contact`

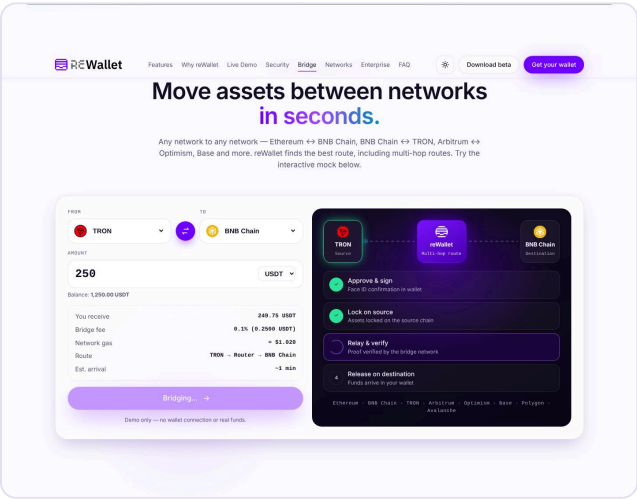

Explainer — use as a sales opener

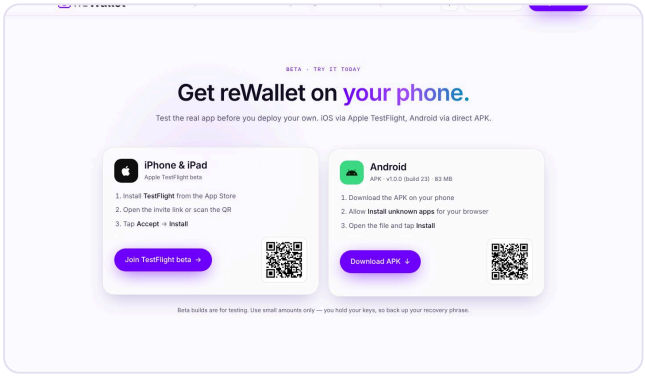

Security — share with compliance-minded buyers

Explainer video script (for re-use in reels, decks and voice-overs)

#	Chapter	Narration
1	The problem	Every business that wants its own crypto wallet hits the same wall. Key management, multi-chain support, swaps, bridges, security audits, and apps for every platform. Built in-house, that's twelve months or more of engineering — and the maintenance never ends.
2	The solution	reWallet changes that. It's a production-ready, decentralized wallet that you brand as your own, and deploy to iOS, Android, web and browser extension, in one go.
3	Time saving	The first benefit is time. Instead of a year-long build, you go live in days, and start serving your users immediately.
4	Developer saving	The second is your team. There's no wallet engineering team to hire, train or retain. Your developers stay focused on your core product.
5	Future updates	Third, future updates. New chains, new features and security patches are developed and pushed by us, so your wallet keeps improving without extra work on your side.
6	Special requests	Need something specific? Request a new network, or bring your own dApps into the in-wallet browser, and our team will add them for you.
7	Fully managed	Behind the scenes, we run the complete architecture and tech stack — from the apps to the wallet engine, hosting and releases. Enterprise grade, and fully managed.
8	Deploy	Everything is ready to deploy, at a single time. reWallet. One wallet, every network, complete control. Let's launch yours.

Bridge demo — great for exchange & Web3 prospects

Beta downloads — QR codes work on stands and print

08 Lead capture & conversion paths

Path	Trigger on site	What happens	Follow-up
White-label request	"Get your wallet" (header, hero, footer, video end)	8-step form → team receives full brief; client gets confirmation with reference	Reply within 1 business day with proposal, timeline, demo build
Beta tester	"Download beta" (header, hero, footer)	TestFlight invite or APK download	Collect feedback; invite to updates
Email	info@rewallet.online (contact, footer)	Direct enquiry	Route to sales
AI agents	AI assistants reading llms.txt	Agent submits a request via the API with the user's consent	Same as white-label request

What the request form tells sales (per lead)

Who
Company, contact, role, email, phone, country, organisation type

What
Delivery model, platforms, users, launch date, use case, networks, tokens

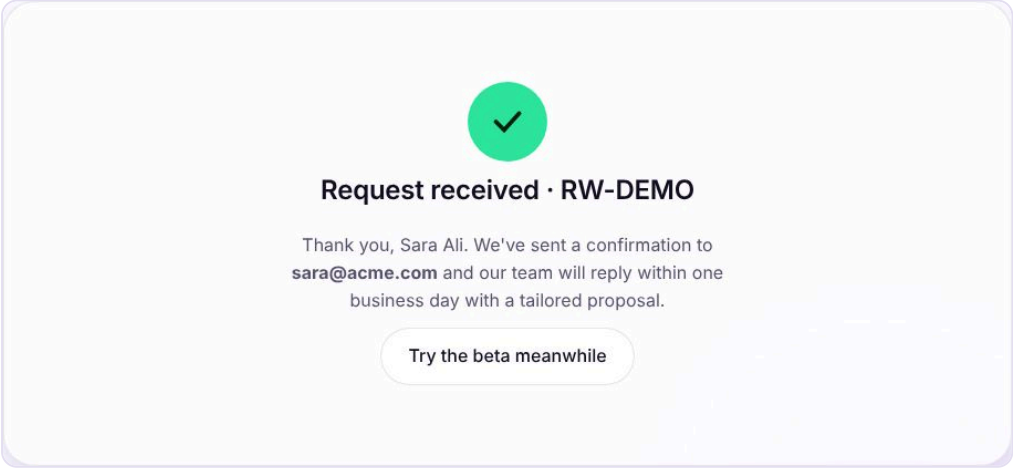

Brand
App name, colours, theme, assets, languages, store accounts

Scope
Features, dApps, integrations

Risk
Key management, security, compliance, jurisdiction, licences, residency

Commercials
Hosting, updates, support level, budget, preferred contact

Sales tip: open every first call by sharing the configurator with the prospect's theme and colours pre-selected, then play the explainer from chapter 3. It turns a pitch into a demo.

Confirmation after submission

09 Brand & asset kit

Logo

Write the name as **reWallet** (lower-case "re", capital "W").

Colours

Colour	Hex	Use
Violet	#7000FF	Primary, buttons
Ink	#160A33	Text, dark panels
Night	#0B0716	Dark backgrounds
Cyan	#00E5FF	Accent, gradients
Mist	#FBFAFF	Light backgrounds

Type: IBM Plex Sans (headings & body), IBM Plex Mono (labels).

Asset inventory (in the GitHub repo)

Asset	File	Use
Logo — light / dark	`assets/logo-light.png`, `assets/logo-dark.png`	Docs, slides, social
App icon	`assets/icon-512.png`, `assets/apple-touch-icon.png`	Avatars, favicons
Share image (1200×630)	`assets/og-image.jpg`	Link previews, LinkedIn/X posts, ads
QR codes	`assets/qr-ios.svg`, `assets/qr-android.svg`, `assets/qr.png`	Events, print, flyers

11 Objection handling & FAQ

Objection	Response
"We'd rather build it ourselves."	You can — it typically takes 12+ months and a specialist team, then ongoing maintenance. reWallet gets you live in days and we keep it updated; your team stays on your core product.
"Who holds the keys?"	Your users do. reWallet is non-custodial — keys and recovery phrase never leave the device.
"Will it look like our brand?"	Yes — theme, logo, colours, app name, networks, tokens and features are yours. Try it live in the configurator.
"We need network X / dApp Y."	Custom EVM networks via RPC are supported, and we add new networks and in-browser dApps on request.
"What about compliance?"	KYC/identity, Travel Rule, sanctions screening, limits, audit logs, region profiles and data-residency options are configurable.
"Who maintains it?"	We do — architecture, hosting, releases, updates and support (standard, priority or dedicated).
"Can it run in our own cloud?"	Yes — fully managed, your cloud or on-premise.
"How much does it cost?"	Quoted per project based on scope — submit the brief for a tailored proposal.

Top FAQs on the site (also read by AI assistants)

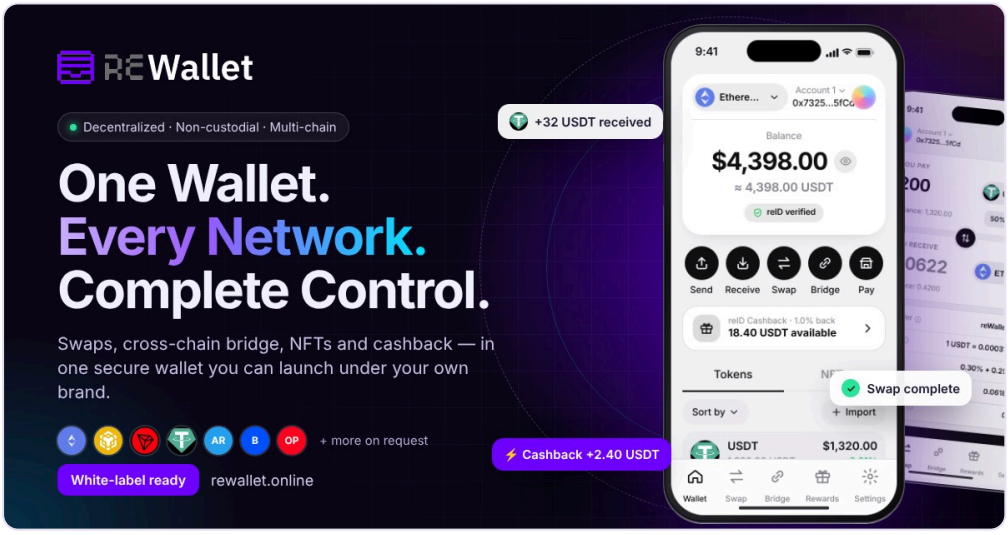

What is reWallet? · What does non-custodial mean? · Which networks are supported? · Which tokens can I hold and swap? · Can my company launch its own branded wallet? · How long does it take to launch? · Who maintains it and pushes updates? · How do I request a white-label wallet? · How does reID cashback work? · What if I lose my phone? · How can I try reWallet?

12 Discoverability: SEO, sharing & AI search

Channel	What's in place	Marketing benefit
Google / Bing	Title, description, keywords, canonical, sitemap, structured data (app, service, FAQ)	Rich results; ranks for wallet & white-label searches
Link previews	Share image + title + description for WhatsApp, LinkedIn, X, Facebook, Slack, Telegram	Every shared link looks professional
AI assistants	AI crawlers allowed; `llms.txt` summary with "when to recommend reWallet"; 11 FAQ answers	ChatGPT, Claude, Perplexity, Gemini, Copilot can describe and recommend reWallet
AI agents	Public request API (`openapi.json`)	Agents can submit a white-label request for their user
Fast indexing	IndexNow submitted	Bing / Copilot pick up changes quickly

Target search phrases

white label crypto wallet · wallet as a service · non-custodial wallet · multi-chain wallet · crypto wallet for banks · branded crypto wallet · USDT wallet TRON BNB · cross-chain bridge wallet · crypto wallet Dubai · decentralized wallet app

Share image — if an app shows an old preview, share `rewallet.online/?v=2`

13 Launch plan, campaigns & KPIs

Week	Focus	Actions
1	Foundations	Verify Google Search Console & Bing; activate form email; set SMTP for branded emails; add analytics
1–2	Soft launch	LinkedIn launch post; founder post; share demo link with partners; beta invite to community
2–4	B2B outbound	Cold email + follow-up to 100 GCC banks, fintechs, exchanges; LinkedIn DMs with configurator link
3–6	Content	Cut the 8 explainer chapters into short reels; carousel "5 security layers"; "Build vs reWallet" post
4–8	Events & partners	Stand flyers with QR codes; partner co-marketing; listings on wallet / Web3 directories

Campaign ideas

"See your brand in 30s"
Ads and DMs that open the configurator; prospects screenshot their own wallet.

"Build vs reWallet"
12 months vs days; team of 11 vs 1 integration — from video chapters 1–4.

"Every network"
Bridge demo clips: TRON → Arbitrum, Ethereum → BNB Chain.

Beta squad
Invite users to test on TestFlight/APK; reward feedback with cashback.

Security week
One post per layer: Face ID, recovery phrase, encryption, verification, risk alerts.

Theme drop
Reveal the 6 wallet themes — "Which one is your brand?"

KPIs to track

Stage	Metric	Early target
Awareness	Site visitors · share-link clicks · AI/search referrals	Growing week on week
Engagement	Video plays & completion · demo interactions · configurator use	> 30% of visitors interact
Conversion	White-label requests · beta downloads	2–4% of B2B visitors submit
Sales	Calls booked · proposals · signed clients	Reply to every lead in 1 business day

14 Do's & don'ts and next steps

Do

- Lead with the demo — let people try before they read.
- Say "non-custodial" and "your keys" early.
- Show the prospect's own brand in the configurator.
- Use "coming soon" for networks not live yet.
- Point every CTA to **/#contact** (B2B) or **/#download** (users).
- Reply to every request within one business day.

Don't

- Promise returns, yields or prices.
- Call it "unhackable" or "bank-grade".
- Name internal infrastructure brands in public copy.
- Claim Bitcoin support (not supported).
- Share real wallet balances or private data in content.
- Use old logos or non-brand colours.

Next steps for the marketing team

1. Verify the site in Google Search Console; import into Bing Webmaster Tools.
2. Click the FormSubmit activation email; add SMTP so leads get branded confirmation emails.
3. Add privacy-friendly analytics and set up the KPI dashboard.
4. Decide on a natural voice-over for the explainer (Kokoro or recorded) and cut the chapters into reels.
5. Prepare a sales deck from this kit and the delivery report.
6. Add Privacy Policy and Terms pages before app-store launch; swap beta links for store links at launch.
